These Planning Base Studies are a pilot project of *Westchester 2025: Plan Together*, Westchester County's web-based, long range land use planning effort. Staff of the Westchester County Department of Planning has worked with the Village of Rye Brook to form this "comprehensive plan foundation." Each chapter utilizes county and non-county data and county GIS mapping resources. These materials are traditionally a substantial part of a comprehensive plan project, as well as a large part of the project's cost.

It is intended for the Village to pursue the next steps toward completing a comprehensive plan for Rye Brook. Interested residents and businesses can access these studies and begin to think about the issues and choices for the Village. The Village intends on authorizing a planning consultant firm to use the studies to shape a proposal for preparing a plan and a public outreach process that uses the data as a starting point to engage the public and businesses. The Village and consultant can then focus on looking to the future, policy options and alternatives – while already having this substantial data collection and synthesis completed.
